

## Daniel Thengvall

I am a software engineer living in San Francisco, currently a Senior Software Engineer at Cruise, previously worked at Wyre, SnapCard and Rixty.

### Cruise

2019 – Present

Cruise is building the world's most advanced, all-electric, self-driving cars to safely connect people to the places, things, and experiences they care about. We believe self-driving cars will help save lives, reimagine cities, redefine time in transit, and restore freedom of movement for many.

### Wyre, Inc.

2016 – 2019

Wyre is the leading infrastructure provider in crypto. After trading over \$3.5 billion in cryptocurrency assets and completing over \$750 million in bank-to-bank FX payments, Wyre has established a network of relationships with leading banks and exchanges.

As a **Senior Software Engineer** I worked to develop the user-facing applications along with administrative tools for the compliance, customer support and accounting teams.

| In October of 2016, SnapCard, Inc. rebranded to Wyre, Inc.

### SnapCard, Inc.

2014 – 2016

SnapCard is a bitcoin payments company, focusing on providing tools for easy management and transfers at the best rate. As a **Senior Software Engineer** I worked to add new currencies through integrations with third party exchanges. Being part of a growing company I wore many hats, from training new engineers to building mobile and web applications.

### Rixty, Inc.

2011 – 2014

Rixty is an alternative payment system focusing on consumers without credit cards.

As **Lead Developer** I managed api integrations with companies like Microsoft, Coinstar and Skrill. I also worked to localize the platform for new countries like Brazil and built tools for the customer support team.

### Skills

Java, Javascript, TypeScript, RxJava, RxJs, RxSwift, Objective-C, Swift, Android, MySQL, DynamoDB, Jooq, Google Guice, Angular, Pug (formerly Jade), LESS, Vertx, AWS, docker, Jackson Jsn, Node.js
